DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 17 is rejected under 35 U.S.C. 102(b) as being anticipated by Lamensdorf (US Patent 5,565,879).

Lamensdorf discloses, in figure 6, an antenna array comprising a plurality of antenna elements(36,37,38,...), and a plurality of switches (35) coupled to the plurality of antenna elements, wherein the electromagnetic energy is coupled to each of the switches.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lamensdorf.

The patent to Lamensdorf, described above differs from the claimed invention because it does not disclose the high frequency electromagnetic beam, however the

Art Unit: 2821

limitation high frequency beam is considered an obvious matter of design choice depending upon the desired characteristic of the antenna system.

5. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsu et al (US Patent 6,417,807).

Hsu et al disclose, in figures 1-6, an antenna system comprising a plurality of antenna segments 240, a plurality of RF MEMS switches 300 for interconnecting the antenna segments, wherein the switches are illuminated by optical energy source 135. The patent to Hsu et al also teaches that the optical source 135 in the optical source layer 130 are individually controlled to selectably provide optical energy to each corresponding RF MEMS switches 300, see column 9, lines 29-43. The patent to Hsu et al differs from the claimed invention because it does not disclose the switching rate of the switches. However the switching rate is considered an obvious matter of design choice depending upon the desired characteristic of the antenna system.

Allowable Subject Matter

6. Claims 5-8, 15, 16, 19, and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. Claims 9-14 are allowed.

8. The patents to Bull et al, Lembo et al, Wolfson et al, Sequeira, Riza, and Cheston et al are cited as of interest showing the antenna similar to that disclosed.
